Hwan Chin Yang

Software Engineer · Full-Stack

Selangor, Malaysia · +60 16-605 7790 · hwan2221@hotmail.com · hwanchinyang.com · github.com/ZenoHwan

SUMMARY

Full-stack engineer with 5+ years of production work in crypto, insurance and fintech. At Coinranking I work on the price pipeline, microservices, accounts and billing, and an LLM pipeline that writes coin content. I mostly write TypeScript and Go, with React, Next.js and Astro on the frontend, MariaDB, MongoDB and Redis for data, and Docker on AWS.

EXPERIENCE

Software Engineer — Coinranking

Jul 2024 – Present

Hybrid · Crypto market data

- Work across the stack on Coinranking Hub, which serves live crypto prices and market data.
- Write and run Node.js/TypeScript services on Fastify and Express, and Go services for the exchange data pipeline (sqlc, gRPC, WebSockets), with MariaDB and Redis.
- Own accounts and billing: plans, API keys, usage metering and upgrades.
- Built a Go service that uses the Claude Batch API with web search to write coin descriptions, about pages and tags. It validates the output, recovers from truncated responses and protects AI-enriched records from later overwrites. Wrote the prompts and tuned model, effort and token limits to keep costs down.
- Generated llms.txt and per-page markdown for the API docs, and added FAQ structured data and SEO copy to list pages.
- Use Claude Code and Codex every day to write and review code.
- Build frontend pages in Astro and React.

Full Stack Developer — Bjak

Aug 2021 – Jul 2024

Selangor, Malaysia · Insurance & lending

- Built Motor Loan from scratch: architecture, data model, lender integrations and launch.
- Worked on the motor insurance and motor loan products (Next.js, NestJS, Express, React, MongoDB).
- Wrote and maintained Puppeteer scrapers that get quotes and buy policies on insurer portals.
- Built AI features for the loan product in Python/FastAPI: payslip extraction, bank statement parsing and IC fraud detection.

Full Stack Developer Intern — Seagate

Feb 2020 – Jul 2020

Penang, Malaysia · Access provision

- Built and documented internal access-provisioning tools in Java (JSP, Servlets) and SQL, including a feature that copies a colleague's access to a new hire.

SELECTED PROJECTS

Cardranking — Naruto & Gundam TCG Dex

Aug 2026 – Present

Card catalogue and scanner apps for trading card games · in development

- Built the shared Go backend (Echo, GORM, PostgreSQL) for every game, and the Gundam app in Expo (React Native).
- Built the card scanner: ML Kit reads the card number on the phone, and a MobileCLIP-S2 image-embedding service matches cards by their art when it can't.

Fuyoh — fuyoh.my

Feb 2025 – Jul 2026

Malaysian insurance aggregator

- Built the Go/Gin backend on MongoDB and Redis, integrating five insurers (Allianz, Zurich, Generali and others) for quotes, policies and payments.
- Built a Playwright scraper that gets a price when an insurer portal returns a referred case, and the Next.js frontend in English, Malay and Chinese.

Check4DResult — check4dresult.com

- Live 4D results for Magnum, Sports Toto and Da Ma Cai that refresh automatically during draws.

Idential.xyz

deprecated

- Search engine for on-chain Web3 credentials by name or Ethereum address. Won USD 6,000 in grants from Aave, Near and Alchemy. Built with Next.js, MongoDB, Prisma and the Alchemy SDK.

SKILLS

Languages	TypeScript, JavaScript, Go, Python, Java, SQL
Backend	Node.js, Fastify, Express, NestJS, Gin, FastAPI
Frontend	React, Next.js, Astro, Svelte, Tailwind, Redux Toolkit
Data	MariaDB, MongoDB, PostgreSQL, Redis, Prisma
AI	Claude API (Batch, tool use, web search), Claude Code, Codex
Infra	Docker, AWS, OpenTelemetry, Prometheus, Playwright, Puppeteer

EDUCATION

BSc (Hons) Computer Science — Universiti Sains Malaysia

2017 – 2021

Major in Artificial Intelligence · Penang, Malaysia
